

All-In-One Headsets

PREVENTIVE MAINTENANCE

- ▶ Position mic about 2" to 3" away from the corner of your mouth. If it's too close, there may be hissing or buzzing.
- ▶ Turn the headsets off before changing the battery or you could lose the programming.
- ▶ Change ear pads and mic muffs often, especially during the cold season to prevent cross contamination. Using Earmates® protects ear pads and are a hypo-allergenic, disposable, affordable solution to constantly replacing ear pads.
- ▶ Store headsets in a designated area, away from water and grease.
- ▶ Let the mic do its job. Speak in a normal voice – don't yell.
- ▶ Keep battery contacts clean by using a rubber eraser to remove any dirt or debris.
- ▶ Clean headsets using an RFT® headset cleansing cloth. If you do not have an RFT approved wipe, you may also use a damp cloth. Electronic based cleaners are also an alternative.
- ▶ Adding a DuraGuard™ helps prevent moisture and grease from entering components and also adds shock absorbent technology.
